

USMAN WARIS

AI PRODUCT ENGINEER

imosmanwaris.tech@gmail.com | +92 320 078 7777 | Islamabad, Pakistan

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

AI Product Engineer who designs, builds, and ships production-grade AI products end to end — from LLM-powered backends to native mobile apps live on the App Store. Experienced in agentic workflows (LangGraph, LangChain), RAG pipelines, and high-performance async backends (FastAPI), paired with hands-on product delivery across iOS (SwiftUI) and cross-platform (Flutter). Combines strong design sensibility with engineering depth, having shipped multiple AI applications to paying users. Seeking AI Product Engineer roles in the KSA and UAE market.

CORE TECHNICAL SKILLS

Languages: Python, Swift, Dart, JavaScript, TypeScript

AI / ML: LangChain, LangGraph, RAG Pipelines, Agentic Workflows, LLM Orchestration, Prompt Engineering, Multimodal (Text + Vision), Hugging Face Transformers, PyTorch, Scikit-Learn (PCA, KNN), OpenCV, CNN

Backend: FastAPI, Flask, Django, Node.js, Microservices, REST API Design, WebSockets, SSE, JWT / OTP Authentication

Mobile: SwiftUI, SwiftData, WidgetKit, Apple Watch, Flutter, BLE / CoreBluetooth, Hive

Databases: PostgreSQL, MongoDB, MySQL, Redis, Firebase / Firestore, Supabase

Cloud & DevOps: Google Cloud (GCP), AWS, Docker, Kubernetes, CI/CD Pipelines

Tools: Git, GitHub, Playwright, Postman, Linux, Claude Code, Cursor

PROFESSIONAL EXPERIENCE

AI Product Engineer | GetSnippet (FreeZone LLC, Dubai-Based · Remote)

2025 – Present

- Own and ship production AI systems end to end — agentic platforms, voice assistants, and automated trading — used by real users.
- Build high-performance async backends in FastAPI handling real-time streams, concurrent workloads, and latency-sensitive operations.
- Engineer agentic systems with LangGraph, implementing memory, tool orchestration, and human-in-the-loop controls for reliable automation.
- Design LLM-driven microservices for multimodal reasoning (text + vision), structured outputs, and autonomous decision pipelines.
- Develop event-driven, real-time architectures using SSE and WebSockets for live execution tracking and system feedback.
- Architect fault-tolerant services with rate limiting, retries, caching, and observability for production reliability.
- Build secure, production-grade auth (JWT, OTP, encrypted secrets) with abuse protection and multi-tenant user controls.
- Optimize LLM cost, latency, and accuracy through prompt engineering, selective inference, and pipeline-level filtering.

Backend & Security Contributor | SNSKIES Ltd, Pakistan

Sep 2024

- Implemented Zero Trust Network Access (ZTNA) frameworks to strengthen organizational security posture.
- Contributed to authentication and verification API development, ensuring secure identity management.
- Strengthened backend access control through role-based authorization and secure token-handling mechanisms.

SHIPPED PRODUCTS — LIVE ON THE APP STORE

Optify — AI Photo Editor (iOS) [View on App Store](#)

- Built and shipped an AI-powered photo editing app integrating generative image models for automated enhancement and creative edits, published live to the App Store.

SpaceFlip — Interior AI Design (iOS) [View on App Store](#)

- Shipped an AI interior-design app that redesigns rooms from a single photo, with a generative image pipeline and subscription monetization serving real users.

VoiceTale — AI Bedtime Stories (iOS) [View on App Store](#)

- Built an AI bedtime-story app generating personalized narrated stories, combining LLM story generation with text-to-speech voice models, published live to the App Store.

KEY PROJECTS

DayCalc — SwiftUI Budgeting App *iOS · Apple Watch · Widgets · SwiftData*

- Built a native SwiftUI budgeting app spanning iOS, Apple Watch, and home-screen widgets, centered on a single always-visible “spend left today” number.
- Implemented a SwiftData + App Group architecture that syncs a shared snapshot across all extensions, with an accessible three-state design system and a full unit-test suite.

Anchor Bracelet Companion App — BLE Wearable *Flutter · Dart · BLE · Hive*

- Designed a resilient BLE service handling pairing, auto-reconnect, connection-state management, and a write-command queue to prevent race conditions during device communication.
- Built a background task runner (`flutter_foreground_task`) for persistent device connectivity across app lifecycle states, including iOS CoreBluetooth state restoration.
- Modeled and persisted device history offline with Hive and implemented timezone-aware scheduled local notifications via a repository-pattern data layer.

MedCon AI — ECG Intelligence & Doctor Verification Platform *OpenCV · Scikit-Learn · Docker*

- Built an end-to-end ECG classification system (OpenCV, PCA + KNN) with automated clinician-ready PDF reporting, fully containerized with Docker.
- Engineered real-time Playwright-based PMDC doctor verification with Firestore logging, reducing manual verification effort by 90%.

EDUCATION

BSc in Computer Science | COMSATS University Islamabad

Jan 2022 – Dec 2025

GPA: 3.06 / 4.00

CERTIFICATIONS

- Introduction to Generative AI — Google
- Agentic AI Bootcamp — Udemy
- AI Engineering Bootcamp: AI Algorithms, Models, and Real-World Projects — Udemy
- Claude Certifications — Anthropic
